Application Portfolio

The Master's programme in Data Analytics for Politics and Society prepares a new generation of analysts and scientists in data analysis, political science, sociology, urban studies, and public administration.

The country and the world need more and more competent analysts who are able to both work with digital data and technology and produce high-quality socio-political analysis. This innovative programme offers a unique combination of training in these fields for university graduates who recognize the importance of these skills for a successful career.

The programme curriculum is based on hands-on project work and a combination of rigorous theory and methodological practice.
