	20	**10**	**5**

Admissions criteria in 2026/2027

Application Portfolio

The Master's program "Data Analytics for Business and Economics" is based on in-depth training in data analysis and interpretation. Depending on the chosen track (Economics or Management), this analytical core is supplemented by specialized disciplines that form a structured approach to problem-solving and decision-making in business and the context of economic policy. The goal of the program is to prepare a new generation of managers and economists who possess cross-functional competencies and are able to make effective data-driven decisions.

The program has 2 study tracks:

Quantitative Economics and Mathematical Methods
(Field of Study: 38.04.01 Economics)

Quantitative Business Analytics
(Field of Study: 38.04.02 Management)

In both tracks, special attention is paid to project and research activities.

The programme targets undergraduates with IT, math, economics, and management background.

Eligible students must have a good command of English.
